

Business model

The TAKKT Group specializes in B2B distance selling for business equipment. The companies and brands operate in attractive markets and focus primarily on the sale of durable and less price sensitive equipment as well as special items that are needed regularly to corporate customers in various industries and regions. The product ranges that are offered mostly encompass durables that companies use for their business activities. The TAKKT companies supply products such as pallet lifting trucks to German automobile suppliers, computer cabinets to Swiss mechanical engineering companies, custom-printed advertising banners for trade shows, shipping cartons to European industrial companies and food service equipment to commercial kitchens in the US.

TAKKT's two business models, Omnichannel commerce and Web-focused commerce, focus on two different customer types. The Omnichannel Commerce segment addresses corporate customers with complex requirements by using multiple points of contact and a broad range of service offerings via online channels, key account managers and print advertising. The Web-focused Commerce segment gears its offerings to the less complex requirements of more transaction-oriented and price-conscious B2B customers mainly through online channels.

Profitable growth and sustainability go hand-in-hand at TAKKT. The group-wide sustainability organization SCORE – Sustainable Corporate Responsibility – laid the foundation in 2011 to coordinate measures for sustainable corporate management across all businesses and implement them in the day-to-day business. The sustainability organization is coordinated by high-level management contacts in each division and is managed directly by the Management Board. This enables TAKKT to ensure the implementation of the sustainability strategy measures throughout the Group.

Framework for reporting

The basis for TAKKT's sustainability reporting and the TAKKT sustainability strategy is the recognized framework of the Global Reporting Initiative (GRI). The company-specific measures, key figures and goals that were defined on this basis, together with compliance management, correspond to the relevant disclosures in the five aspects of environmental issues, employee issues, social issues, respect for human rights and combating corruption and bribery, and are therefore part of this non-financial statement.

Environmental issues

Supplier assessment

TAKKT does not face any substantial risk with respect to dependency on individual suppliers. The company relies on a fragmented pool of suppliers and ensures that nothing will change in this situation, even in the long term. For TAKKT as a direct marketing specialist for business equipment, an important part of the value chain already lies in the procurement of goods. For this reason, TAKKT places a strong emphasis on sustainability in its supply chain. TAKKT does this by collaborating with the internationally recognized EcoVadis platform. The evaluation allows the relevant aspects of sustainable practices to be shown in a transparent manner in the business models of the suppliers while identifying where there is room for improvement. By repeating the audits at regular intervals, TAKKT aims to measure the progress and improvement of the suppliers. The four areas that EcoVadis analyzes are "environment," "social conditions," "ethics" and "supply chain." TAKKT product managers can view the results in the online portal, make suggestions for improvements to the suppliers and draft development plans. The evaluation program was successfully tested in 2013. Since then it has been gradually expanded.

In 2020, the share of sourcing volume from suppliers certified by EcoVadis amounted to 49.1% and was at the lower end of the target corridor of 50–60% that TAKKT wanted to reach by 2020. TAKKT also uses the EcoVadis platform to

evaluate suppliers for direct imports: In 2020, 54.2% of the sourcing volume of direct imports were certified. This means that the target corridor of 30–40% defined for 2020 was clearly exceeded.

The four areas of analysis – “environment”, “social conditions”, “ethics” and “supply chain” – also make supplier evaluation relevant for the aspects of employee issues, respect for human rights, and combating corruption and bribery.

Green products

The excellent quality of the products ensures their long service life, which benefits the customer. Therefore, TAKKT’s intention is to take responsibility for the entire life cycle of the products sold – from sourcing to their use, including the disposal of materials and packaging. Together with its partners, the company is systematically expanding the range of sustainable (“green”) products in all sales companies. External product certifications are relied upon as much as possible. For example, an environmental performance report certified by the German Association for Technical Inspection (TÜV) was prepared for EUOKRAFT Active Green products; the carbon emissions generated during production are completely offset. The percentage of sustainable (“green”) products was 10.8% of total sales in 2020. By 2025, the share should be at least 20%.

Resource efficiency

Printed advertising materials such as catalogs continue to be an important medium for customer communication in direct marketing. At the same time, they are responsible for a large portion of TAKKT’s carbon emissions. This is why TAKKT works exclusively with efficient and modern printing houses. Almost all of the paper used to produce the print advertising materials is from certified resources (FSC/PEFC). By systematically expanding the e-commerce activities and shifting the marketing budget from print advertising to online marketing, TAKKT is reducing paper usage and conserving resources. In 2020, TAKKT used 2.8 kg of paper per order and was therefore already well below the target of 6.0–6.5 kg defined for 2020.

The company also works towards continuously improving the use of resources in business operations. Modern environmental management systems and the corresponding certifications provide the foundation for this. In 2020, ten major TAKKT companies had an ISO 14001-certified environmental management system. This means the target corridor of 10–13 major companies planned for 2020 has been reached.

Carbon emissions

TAKKT’s distance trading model offers clear advantages over trading systems with local stores. Shipping routes are optimized and emissions minimized due to the elimination of additional transportation steps. The customer also benefits from increased product availability, short delivery times and adherence to delivery dates. Nevertheless, TAKKT is continuously working to further reduce the use of resources at all stages of value creation and to be as environmentally friendly as possible.

TAKKT actively supports the careful handling of natural resources and climate protection. Since 2010, TAKKT has gained important starting points for targeted improvement measures – such as the use of environmentally friendly materials and production processes – from the collection of carbon emissions data. In 2020, ISO 14064-certified carbon footprints had been created for 16 major companies. This means that the number of 15–18 carbon footprints defined by 2020 has been reached.

The introduction of certified carbon footprints enables us to ensure the greatest possible transparency regarding the carbon emissions generated along our value chain. We have implemented projects and measures based on these results in order to sustainably reduce the carbon emissions that result from this. However, carbon emissions can only be reduced to a certain extent. Particularly in our focus areas of marketing and logistics, which are the largest drivers of carbon emissions, we intend to offset the resulting carbon emissions step-by-step by supporting carefully selected and certified climate protection projects.

TAKKT has set itself the ambitious goal of making essential activities throughout the Group completely carbon neutral by 2025. This means that by 2025, all printed advertising materials and product shipping should be carbon neutral. 100% of the printed advertising materials are currently already carbon neutral.

At the same time, TAKKT also aims to make its product shipping as environmentally friendly as possible and is working with numerous logistics partners to make its shipping carbon neutral. In 2020, 93.5% of parcel shipments and 87.1% of general cargo shipments in Europe and the US were offset.

In the area of marketing TAKKT aims to introduce carbon-neutral web shops for all major companies by 2025. 15 web shops were already made carbon neutral by 2020, so that the goal set for 2020 was reached.

Energy consumption

To further reduce energy consumption and limit harmful emissions, TAKKT is focusing on the areas that show the greatest potential for savings and development. These are also identified through the introduction of certified energy management systems. An important part of these certifications is to establish a continuous improvement process. The introduction of certified energy management systems in accordance with ISO 50001, which was already carried out in six major companies in 2020, will be pursued further until 2025 and implemented in ten major companies. In doing so, TAKKT also intends to further reduce energy consumption per order at German and US locations by 2025, for example by continuing to switch to LED lighting in the central warehouses.

In 2020, the value was 51 MJ per order and thus in the internally set target corridor of 50–55 MJ per order.

Employee issues

Human resources strategy

As part of our digital agenda, we have created around 90 jobs for new employees with specific digital skills since 2016. This particularly affects the areas of web shop programming, online marketing and data & analytics. It is important to retain the hired talents in the context of the digital agenda in the long term. It was planned that at least half of these talents would still be with the company in 2020.

In 2020, 61.7% of the new employees hired as part of the digital agenda were still with the company. To achieve this goal, the company adapted its organization and working methods and supported the digital expertise of its employees through targeted training. Investments in creating modern workspaces help to develop the corporate culture in a way that lets us achieve our goals.

Diversity

TAKKT is convinced of the added value of having mixed management teams and considers it a company-wide duty to ensure the same career development opportunities for women and men across countries and divisions. The aim of the activities is to increase equal opportunities through various measures. This includes making it more of an objective of the recruiting process to find female candidates for high-level management positions as well.. Targets were set for the share of female participants in internal talent development programs. In addition, women are also

explicitly taken into consideration in succession planning. In addition, better compatibility of family and work based on individual needs, such as by expanding childcare options and the option to work from home, should create an appropriate gender ratio. In 2020, 14% of top management positions were held by women. In order to reach the goal of having the share of women in top management positions at more than 30% by 2025, TAKKT will continue to pursue initiatives to support diversity and gender equality in the coming years.

Social issues

Social commitment

For TAKKT, social commitment is an important part of responsible action. The company sees itself as part of society and therefore as a driver of local projects. Besides organizations and institutes that work on environmental and social issues, the company especially supports the volunteer commitment of its employees. Paid leave gives these employees the opportunity to lend their support on site with their involvement. 86.1% of employees were able to utilize this opportunity in 2020. In fact, 9.5% participated in local volunteer projects. The goal of offering 55–60% of employees the opportunity to take paid leave as well as having 8–12% of employees actively involved by 2020 was therefore achieved.

Respect for human rights

Guidelines and commitments

TAKKT views compliance with legal and contractual obligations as well as with ethical principles as being of the highest priority. In order to ensure this and support employees in their day-to-day work, the company adopted a revised TAKKT Code of Conduct in 2014. It is derived from the company values and the principles of the United Nations Global Compact as well as other international standards. As an active supporter of the Global Compact Initiative since early 2012, TAKKT is committed to complying with the ten universal principles in the areas of human rights, labor, environmental protection and anti-corruption, and to ensure their propagation. TAKKT has achieved the “Advanced Level” of the Global Compact with its comprehensive and results-oriented sustainability reporting. It aims to maintain this high level.

Combating corruption and bribery

Compliance management

TAKKT’s corporate values provide an orientation and form the basis for internal collaboration as well as cooperation with business partners. Responsible corporate management (Corporate Governance) is one of TAKKT’s fundamental principles. For this reason, we explicitly support the objectives of the German Corporate Governance Code. A responsible approach to business-related risks is a requisite for good Corporate Governance.

The Management Board and management have extensive group-wide and company-specific reporting and control systems available that make it possible to record, assess and manage these risks. TAKKT AG attaches the highest priority to its compliance with all statutory and contractual obligations associated with responsible Corporate Governance. TAKKT is subject to a variety of compliance requirements, including the areas of antitrust law, capital markets and data protection. Non-compliance with group-wide compliance principles (such as in antitrust law or capital market compliance) could have considerable legal consequences (e.g., lawsuits, exclusion from government contracts) and therefore financial effects (e.g., fines, lost sales from damage to the company's reputation), which would also have a negative impact on earnings.

To address this risk, the company pursues a central compliance management system that is checked by the specialist departments and the compliance officer. These measures allow possible breaches to be identified quickly. In addition to the existing TAKKT Values, the TAKKT Code of Conduct and the TAKKT compliance management guidelines (e.g., for anti-corruption and anti-discrimination matters), TAKKT also has a whistleblower hotline set up with an external service provider where employees can, to the extent permitted by law, report compliance violations anonymously. In addition, TAKKT has expanded the existing system where employees are trained in compliance-related issues by means of an electronic platform and receive a certificate upon successful completion of the tests. In the year under review, this was expanded to additional languages to increase the level of acceptance and understanding throughout the entire Group. Additional training on core issues in compliance is offered as needed.
